

PLUMBIFY AI SALES TEAM

Weekly Operations & Funnel Performance Report • July 31, 2026

1. Funnel Performance Metrics

Metric Name	Count	Funnel Stage
Total Harvested Leads	1302	Ingested
Leads with Emails	1291	Email Track
Leads with Phone Only	10	SMS Track
AI Outreach Drafted	9	Drafted in GHL Notes
Pending AI Outreach	1291	In Queue
Replied Leads (Warm)	0	Engaged
Demos Booked	0	Converted (Goal)

2. Executive Summary & AI Analysis

This week, our AI Sales Agents harvested 1302 leads, with an impressive 99% possessing email addresses, indicating a strong lead data quality. However, current conversion rates stand at 0% from outreach-to-reply and subsequent booked demos, as virtually no outreach has been initiated for our harvested leads.

The primary bottleneck is demonstrably at the very first stage: the lack of activated outreach. We have 1291 leads pending outreach, yet only 9 pieces of outreach copy were drafted this week. This critical standstill is preventing our AI agents from engaging any harvested leads.

For next week, my immediate recommendations are:

1. Expedite the drafting, review, and approval of outreach copy to activate our AI Sales Agents immediately.
2. Investigate and resolve the systemic or process-related issue preventing outreach from commencing for the 1291 pending leads.
3. Implement a rapid deployment plan to initiate outreach to all available leads, transitioning from pending status to active engagement as swiftly as possible.

3. Operational Recommendations

- **Improve Email Coverage:** If phone-only leads are high, cross-reference with LinkedIn or Apollo to fetch emails before attempting cold SMS.
- **Trigger Automated Sequence:** Transition tags from 'outreach-drafted' to trigger GHL native email sequences for contacts that pass manual review.
- **Vapi Warm Integration:** Configure an automation to trigger a Vapi voice call 5 minutes after a lead opens the outreach email.
